

In the name of Allah The Most Gracious, The Most Merciful ...May Allah bestow His Peace and Blessings upon the prophet Muhammad (Salla Allahu Alayhi Wa Salaam), his family, his companions, and all His servants...Ammma badt...

“A Journey in Search of Truth”by TauFiq Abdul Wajid

Are you brave enough to take a journey with me? A journey in search of truth? Before we depart we must first leave behind all excess baggage that is in the form of societal norms, beliefs, and most importantly taught indoctrinations. To begin, we start by closing our eyes and imagining we are on the top of the highest mountain overlooking the entire earth. We two (man and woman) are the only people on earth. We have the knowledge of all things in the physical world at our disposal. Today is the first day of our existence.

We open our eyes and look upon the earth. We see the many different varieties of fruit trees, vegetables, plants, fish, animals, herbs, and countless other things that provide sustenance for us as well as every living creature on the planet. We see that there is an abundance of freshwater for us to drink and bathe. We also see that we have each other for companionship.

We live many years in peace and tranquility transversing through the earth. Since we have the knowledge of all our physical world, we reflect upon various aspects of it. We reflect upon the countless different ecosystems on the earth and how intricately balanced they are, namely how if you remove one species the whole ecosystem is subject to collapse. We reflect upon the condensation between oceans and clouds and how the salty undrinkable ocean water slowly evaporates to form clouds. We reflect how these clouds move all around the earth providing all creatures with life sustaining water to drink.

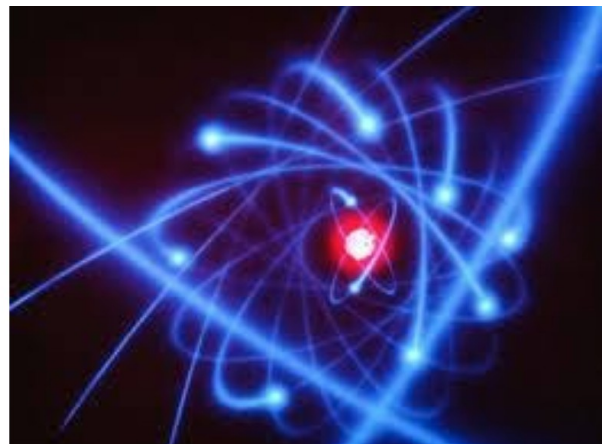

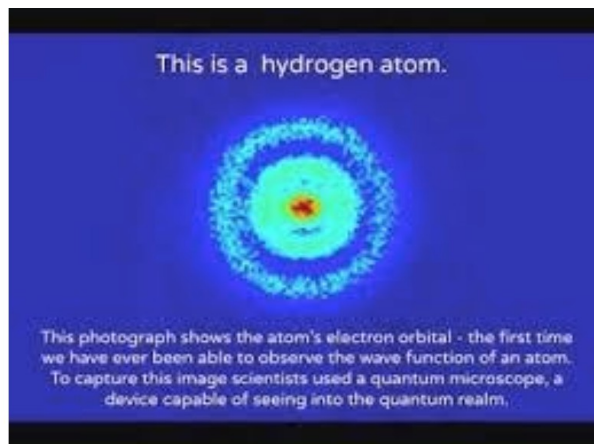

As we reflect, we conclude that everything in creation serves a purpose, from the seemingly insignificant plankton, of which all life in the oceans would likely become extinct to our far distance sun whose 93 million mile distance is so precise and necessary, if it was a mere couple of thousand miles closer or further life on earth would dramatically and detrimentally be compromised. So yes, as we reflect we emphatically conclude that everything in creation is meticulously balanced and serves a purpose. We are awed by these facts.

We acknowledge the factual premise that where there is purpose there must first be design and where there is intricate and balanced design there must be a Creator. Through these reflections and acknowledgements we begin to ask questions pertaining to our existence. Two questions are foremost in our minds: 1. Is there a Creator? And 2., What is our purpose in life? Just as you will know a painter

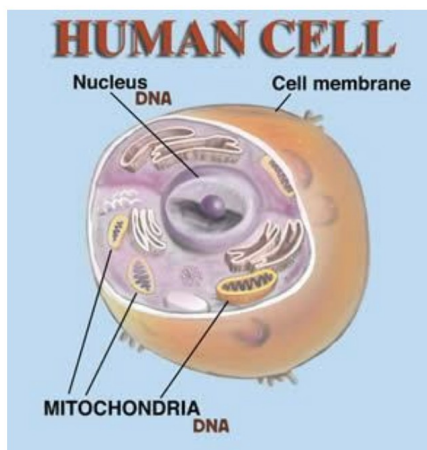

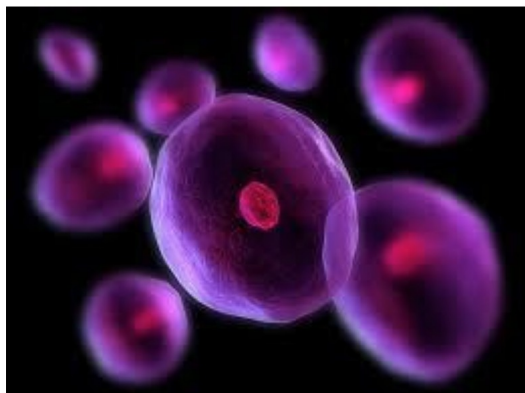

by his painting style, an architect by the style of his buildings, a writer by his literary style, we conclude that we will know our Creator by studying His creation.

We begin our search for the answer to these questions by studying the empirical (the things around us) knowledge of our physical world. After processing all the knowledge of our physical world, and once again being awed by the balance and design throughout, four distinct areas in creation stand out; that is, they show consistency of design and purpose in their structure despite owning their own distinct niche in creation as we shall see. Amma badt (to begin).

When we study the microcosm world of atoms, which make up all inorganic (non-living) matter in our universe, we see that at its center is a nucleus. The nucleus of the atom is surrounded by electrons that are constantly encircling it in their respective orbits. The motion of the electrons moving around and around the nucleus is indicative of them paying homage to (worshiping) that which is greater than themselves.

The next distinct area in creation that we study is the microcosm world of cells. Cells make up all organic matter in living things. At the center of the cell is a nucleus. This nucleus is surrounded by centrioles, ribosomes, mitochondria, etc in a liquid called cytoplasm that encircles the nucleus. Once again, this encircling motion around a single point is indicative of paying homage to or pointing to that which is greater than themselves (worshiping).

As we leave the microcosm world and look to the distinct macrocosm world of our solar system we see the same grand design. We see that just as in atoms and cells, our planets likewise revolve around and around the sun as if showing us, directing us... to the most important purpose in creation which is to pay homage to, to worship that which is greater than ourselves. Their paying homage to (worshiping) has been consistent for billions of years without rest. One may venture to say that the sun is surely the greatest thing in creation because it has these massive planets revolving around it as if paying homage; however, this does not stand up to muster.

Our sun, along with its planets, are all constantly in revolution around the center of our galaxy so the sun also pays homage to that which is greater than itself. Our galaxy is only one of billions of galaxies in the small area of the universe we are able to see. Our galaxy, the Milky Way, has hundreds of billions of suns/solar systems (approx. 400 billion) all revolving on spiral arms around and around the galaxy's center as if pointing to that which is greater than themselves.

These four distinct areas in creation unequivocally have the same grand design. Any person with an iota of sense must deduce that it would be mathematically impossible for this same grand design to have evolved in all these different areas of creation by chance. So by studying these distinct areas in creation we are able to answer the two aforementioned questions beyond all shadows of a doubt.

Is there a Creator? We conclude yes there is a Creator as the proofs clearly indicate. The proof tells us there is a single Creator who created us and everything else in the universe. The proof directs us, since we are a part of creation and not the Creator, to pay homage to the Creator, to worship him and obey him in all that we do...everything else is secondary. [See also.](#)

Let us bathe in the fact that every atom and cell that composes everything in the universe points to and worships the Oneness of the Creator and we are no different in our being and purpose. Let us be humbled by the fact that every atom and cell in the universe worships our Creator and thus our ability to recognize our lowly position to our Lord should be increased. Let us never ever associate partners with our Lord because clearly this would be going contrary to all that creation points to and the ramifications can only be self-destructive.

Having ascertained that there is a Creator we deduce that he is a loving Lord because of the many blessings he has given us in the form of sustenance. Don't misunderstand, the sustenance that evil men have withheld from others does not take away from the fact that the Creator has indeed provided it for all His creatures in abundance. Being loving means you want the absolute best for those you love. We therefore deduce that never would our Creator have created us without providing clear guidance for us to follow.

This brings us to our next question. Where is this guidance found? We all must bear witness to these truths on our own. I will say this, His true guidance must direct us to the worship of ONE Creator who has no partners. The proof in all of the universe confers nothing less. His guidance will be filled with that which directs us to His worship and His worship alone.

Lastly, I will add that we should be very critical of information which does not direct us to the worship of one Lord. Every atom in the universe directs us to nothing less... May the Peace and Blessing of The Most High be upon you and your loved ones...Taufiq Abdul Wajid

If you can find a source that directs us to the Oneness of our Creator more than the following.... let me know.... until then here's a start...

<https://drive.google.com/open?id=1N6x4vLcw2sGcefHqBotkKvGIRHQIjfZ2>

and...

<https://drive.google.com/open?id=0B1q7pqeJ0PWGaDNTaDV5QIZ6ZmM>

and...

<https://drive.google.com/open?id=0B1q7pqeJ0PWGNEN1TUZjWmhrTkU>

then...
